Tropical							

	High Threat
	Moderate Threat
	Slight Threat
	No Discernible Threat

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

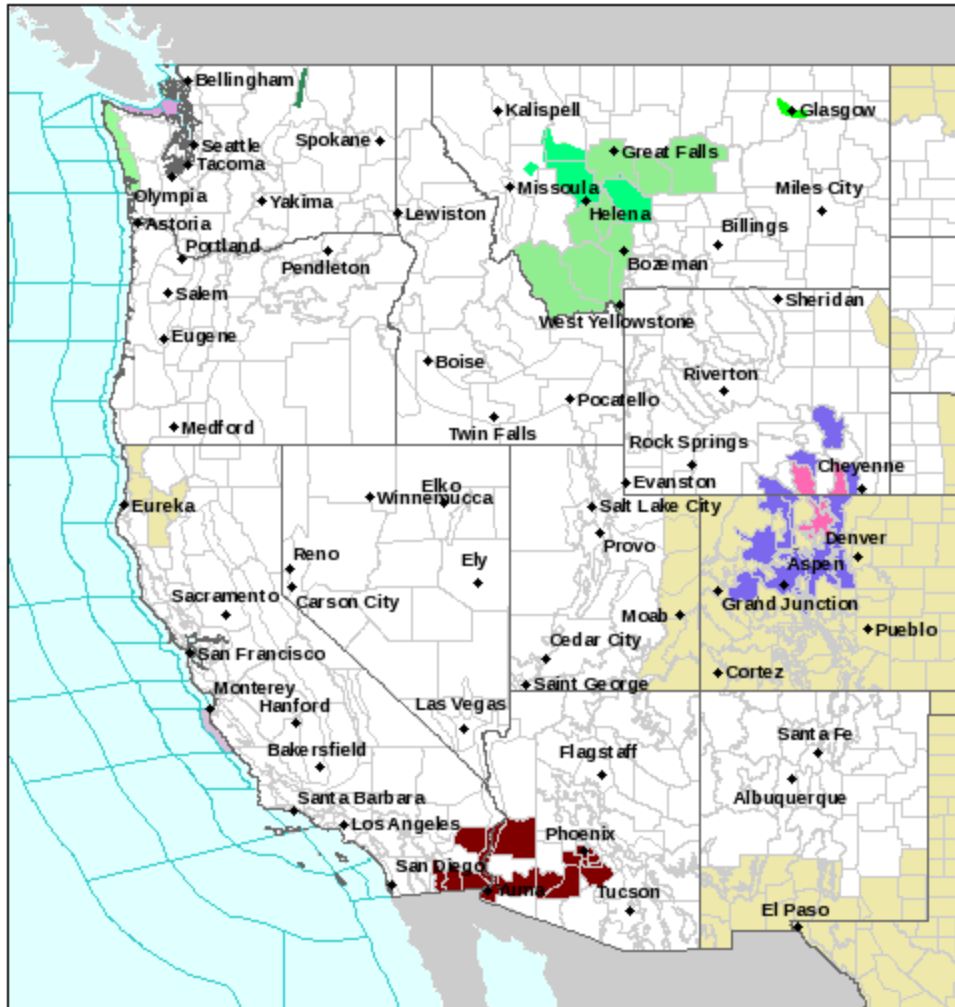

A ridge of high pressure will build over the region the next few days bringing warm, fuel-drying weather. Afternoon temperatures will remain around the mid to low 80s, with the warmest temperatures still around 8-10 degrees above normal in the inland valleys. Light winds will become mostly southerly to westerly this afternoon, and remain the same for several more days. A few showers are possible in the Northwest (NW) mountains Saturday night through Sunday night as a weak weather system moves through the region. Cooler temperatures are not anticipated with this system. Warmest areas are expected to be around the 90s on Monday with pressure returning briefly over the region. A few showers are possible again in the NW areas late Tuesday into early Wednesday from another weak weather system.

SOUTHERN CALIFORNIA

A ridge of high pressure will build into California from the Pacific Ocean bringing substantial warming and drying to the region through Saturday. Maximum temperatures will be around normal today, with 60s to low 70s across the mountains and mid 70s to low 80s in the valleys. Temperatures will warm to the upper 60s and 70s across the mountains and mid 80s to low 90s in the valleys Friday with a few more degrees of warming Saturday away from the coast. Minimum humidity will be between 20% and 40% today and then drop between 15% and 30% Friday. The ridge of high pressure will weaken bringing a few degrees of cooling to the region Sunday and then there will be little change in the temperature through early next week. Minimum humidity will be mainly in the teens above and inland from the marine layer Saturday through early next week. A Pacific trough may drop down the West Coast bringing a more significant cooling trend to the area starting Wednesday. No rainfall or significant winds are anticipated over the next week.
